

Software Development

Software Development It is very important that the company you choose to work with for the development of your software products be fully aware of the differences between developing a custom software application and developing a software product.

Vitilit has gathered significant experience developing software products, with tens of thousands of end-users and we stand ready to put our experience, innovative thinking and cost-competitiveness at your disposal, assisting you throughout the product development cycle, product conceptualization, design, initial development or additional enhancements for existing products and comprehensive tests, to ensure that what you deliver is a premium quality product.

Our strategic approach to product development is tailored to the needs of each client and it is centered on your business objectives. Understanding how much requirements can evolve during the development of a product, we make full use of our experience in iterative development, prototyping techniques, 3rd party modules to aid in development process and maintain a permanent feedback cycle with clients, for improvements and fine-tuning. Our team of highly motivated professionals are ready to commit to your efforts during development and afterwards, throughout guarantee and maintenance.

Our advantages developing software products:

- Technical team with both communication and motivation, able to understand your business goals
- Exhaustive testing - both automated and manual. CIPL is well versed in employing various automated testing tools
- Proven product development expertise across a wide range of sectors & technologies
- Ability to respond to your needs of capacity & technical skills in a very short time
