

## Dedicated Servers

### Dedicated Servers

- Mac OS, Linux & Windows

A dedicated server from Vitil IT gives you the power and flexibility of your own server without large capital expenditure as you are renting the hardware and software from Vitil IT.

We source high quality hardware from proven manufacturers to ensure reliability and compatibility with your application. As a minimum specification, all servers are provided with hardware-mirrored drives (RAID 1) and base components that allow upgrades to your server with minimal downtime and expense.
